

I named the table that I store static data 'visit'.

```
mysql> describe visit
-> ;
```

```
+-----+-----+-----+-----+-----+-----+
| Field          | Type          | Null | Key | Default          | Extra          |
+-----+-----+-----+-----+-----+-----+
| id             | int           | NO   | PRI | NULL             | auto_increment |
| ctime          | timestamp     | YES  |     | CURRENT_TIMESTAMP | DEFAULT_GENERATED |
| tracker        | varchar(50)   | YES  |     | NULL             |                 |
| page           | varchar(500)  | YES  |     | NULL             |                 |
| user_agent     | varchar(200)  | YES  |     | NULL             |                 |
| language       | varchar(10)   | YES  |     | NULL             |                 |
| cookie_enabled | int           | YES  |     | NULL             |                 |
| screen_height  | int           | YES  |     | NULL             |                 |
| screen_width   | int           | YES  |     | NULL             |                 |
| window_height  | int           | YES  |     | NULL             |                 |
| window_width   | int           | YES  |     | NULL             |                 |
| network_type   | varchar(10)   | YES  |     | NULL             |                 |
+-----+-----+-----+-----+-----+-----+
12 rows in set (0.00 sec)
```

HTTP Method	Example Route	Description
GET	/api/static	Retrieve every entry logged in the visit table
GET	/api/static/{id}	Retrieve a specific entry logged in the visit table (that matches the given id)
POST	/api/static	Add a new entry to the visit table
DELETE	/api/static/{id}	Delete a specific entry from the visit table (that matches the given id)
PUT	/api/static/{id}	Update a specific entry from the visit table (that matches the given id)
